

*Bringing evidence-based medicine
to frontline health workers worldwide*

September 2010

Position: Field Coordinator (India)

D-tree International is a non-profit organization dedicated to improving the quality of health care available to the world's poor by using hand held technology to provide accurate and effective point-of-care diagnosis and treatment. Our vision is to equip frontline health workers with the tools they need to deliver first-class, evidence-based medical care to all patients. We are pursuing this vision by putting easy to use guidelines for diagnosis and treatment on mobile phones for use by health workers.

We are seeking a Field Coordinator for a new program being launched which is focused on maternal and child health. This project will use open source software to help strengthen and monitor service delivery for pregnant mothers and their newborns. We will be designing applications around antenatal care, labor, postnatal care and neonatal care to assist the Auxiliary Nurse Midwives (ANMs). We are looking to hire on a full time consultancy basis for a period of up to six months. The position will be based in our implementing partner's office in Patna, India and will be working regularly in the field with the ANMs.

We seek a candidate who is motivated, interested in health care and technology, open to innovative ideas and technology, efficient, eager to learn, a talented project manager and team player. The position will require working closely with the health workers, the partner organization and the D-tree team to implement the program. Responsibilities will include helping design the health protocols and software applications, training the ANMs to use them, and building the capacity of our partner organization to support the program. We expect the candidate to be able to help plan for implementation, report on the progress of the program and contribute to problem solving in a proactive manner.

Job Responsibilities

- Coordination of maternal and child health program activities including work planning, field testing, training of users, and basic management of field finances
- Regular data collection, monitoring, evaluation and reporting
- Basic IT Support for program applications

Required Skills and Experience

- BA degree; MPH or other related master's degree desirable
- Work experience: 1-3 years in public health, development or other related field
- Willingness to live and work in India for up to 6 months
- Computer Skills: IT administration experience or willingness to learn helpful
